CABLE TRAY

SG Power Cable trays are an essential component for safe and organized cable management in industrial, commercial, and infrastructure installations. They provide a strong and reliable support system for routing electrical power cables, control cables, and communication cables while ensuring proper ventilation and easy maintenance.

Manufactured using high-quality galvanized steel or mild steel, cable trays offer excellent mechanical strength and corrosion resistance, making them suitable for indoor as well as outdoor applications. Their modular design allows easy installation, expansion, and cable inspection, reducing overall installation and maintenance costs.

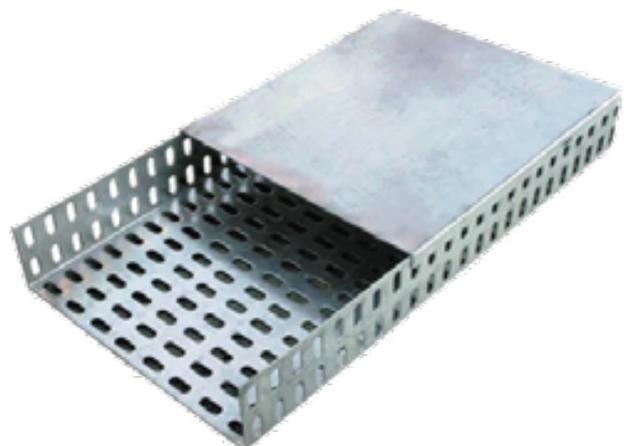

Cable trays are widely used in power plants, manufacturing facilities, commercial buildings, data centers, and infrastructure projects where large volumes of cables need to be managed safely and efficiently.
